

NORTHSTAR ENDOCRINE CONSORTIUM
TYPE 2 DIABETES MELLITUS CLINICAL PRACTICE GUIDELINE
Version 1.0
Effective date: 2022-01-15
Publisher: Northstar Endocrine Consortium (synthetic)
Authority: Official Clinical Guideline (Tier 2)

PURPOSE

This synthetic guideline addresses pharmacologic therapy for adults with type 2 diabetes mellitus. It is fictional evaluation content. It contains no real patient data.

CLINICAL MANAGEMENT RECOMMENDATIONS

First-line pharmacologic therapy for adults with type 2 diabetes is a sulfonylurea.

Lifestyle counseling should accompany pharmacologic therapy.

This version does not discuss metformin as preferred initial therapy.

MONITORING

Reassess glycemic control after therapy initiation.

Screen for hypoglycemia when using sulfonylurea therapy.

LIMITATIONS

This document is synthetic. It is intentionally outdated relative to Guideline Version 2.0.
